

CASE STUDY

Design and Implementation of hotline via IP platform, connecting Mehrabad International Airport and Persian Gulf Airport in Asaluye

According to International Standards, it is necessary for Hotline link connecting the Airport infrastructure. In the absence of telecommunication infrastructure as well the high deployment costs associated, Tavanesh by setting an IP platform answered this need.

Project:

Hotline link connecting Mehrabad Int. Airport in Tehran & Persian Gulf Airport in Asaluye.

Lack of telecommunication infrastructure for Hotline transmission.

Solution:

Utilizing Cisco equipments, Voice Modules, DSL (Comtrend) and Redline equipments, the Hotline link was transmitted from Mehrabad Int. Airport to Nakh-e Taghi Village, hence to Persian Gulf Airport.

The Technical Team, implemented an impressive task in the design and compatibility of Airport equipment and Cisco Hardware.

Result:

Hotline link connecting an isolated Airport to the main infrastructure of the nation.

Considerable cost saving

Tavanesh was launched, with the primary aim to provide solutions, consultations, sales, installation, implementation and technical support services for Telecommunication, Satellite, Wireless, LAN and WAN computer networks and equipments. In the short time since the start off, Tavanesh has been able to fully realize the predetermined goals of the company.

Tavanesh offers a wide range of services in the design, installation, implementation and data security, for further information on the wide range of services and products, please visit our website.
