

CASE STUDY

Design & Implementation of Data/Voice network for the National Iranian Oil Products Distribution Company.

The growing number of users has made network optimization & development an undeniable necessity for organizations. The National Iranian Oil Products Distribution Company optimized & developed the organizational network via Tavanesh.

Project:

Development of High speed network for Data transmission
IP Telephony and PSTN network connection
Connectivity with Novel Servers situated at other buildings
Data, Video & voice traffic management over the network

Solution:

Design & Implementation of network was accomplished by utilizing Cisco Systems Core, Distribution & access Layer Devices. IP phone & Call Manager jointly installed on the network.

Result:

High Speed Network access
Reduction of Telephone Cost
Fast Troubleshooting
Integration Network infrastructure

Tavanesh was launched, with the primary aim to provide solutions, consultations, sales, installation, implementation and technical support services for Telecommunication, Satellite, Wireless, LAN and WAN computer networks and equipments. In the short time since the start off, Tavanesh has been able to fully realize the predetermined goals of the company.

Tavanesh offers a wide range of services in the design, installation, implementation and data security, for further information on the wide range of services and products, please visit our website.
