

CASE STUDY

Server Room Design & Implementation at NAJA IT Center

The importance of e-government and emergence of new concepts such as e-police and the "Police+10" services in Iran, NAJA IT Center commissioned the design and the installation of HP servers.

Project:

Installation & Implementation of HP hardware equipments

Installation & Implementation of Server Room & the related Software system

Solution:

After the deployment of the Hardware equipments, Tavanesh Technical team installed Windows and Linux operating systems with the required software applications on the servers. With special care and attention to the redundancy in the design for increased security and reliability.

Result:

Having in place a fully redundant, secure and reliable Server Room, based on HP equipments and standards.

Tavanesh was launched, with the primary aim to provide solutions, consultations, sales, installation, implementation and technical support services for Telecommunication, Satellite, Wireless, LAN and WAN computer networks and equipments. In the short time since the start off, Tavanesh has been able to fully realize the predetermined goals of the company.

Tavanesh offers a wide range of services in the design, installation, implementation and data security, for further information on the wide range of services and products, please visit our website.
